Summer Work

Mathematics

Students Entering 9th Grade

All students will receive a math packet which will be mailed home with August Newton Notes. We send the math packet out in August so that students complete the work close to the beginning of the school year. This ensures that each student is ready to face the challenges of the current year. We therefore encourage the students to complete the packet in the weeks leading up to the start of school in the fall. The packet can also be found on line.

The math summer work packet requires that the students practice previously learned math skills. Those students entering Algebra I in the fall will receive a packet which focuses on PreAlgebra concepts. Students entering Algebra II in the fall will receive a packet which focuses on those skills and concepts learned in Algebra I. A brief review section accompanies each problem set to help students recall critical information. Students may use a textbook or notes to help them complete the packet. The students generally find the packet is a good review of the key concepts learned in 8th grade math class.
